

MIXED

MIGRATION TO INTERMEDIATE XML FOR ELECTRONIC DATA

MIXED

Expectations

Data Archiving and Networked Services

DANS

what do we expect

- scenarios – programmes
- first steps – snowballs
- opportunities
- combinations – synergy
- interaction – integration
- overview – direction
- *the unexpected*

The fields of gold

= digital information

- the life-cycles of information
- the role of information in research
- the structure of information
- organisations that care for information
- technologies that underpin information
- economies that sustain information

Workers in the fields

- life-cycles
- role in research
- structure
- organisations
- technologies
- economies
- preservation experts
- methodologists
- standards designers
- data archivists
- ict architects/developers
- management

Harvesting

MIXED grows on four fields

- digital preservation
- data archives
- research infrastructures
- ict and open source

The first step

- MIXED as we know it is only a first step
- We want to embed the result somewhere in the digital information world
- We have lots of questions
- We want your questions!
 - and feedback
 - and suggestions, and answers

Growing

- **we** do not want to grow
- digital preservation must become ever so easy
- if MIXED dissolves in that wider effort: so much the better
- but what can spark off that wider effort?

so many ways

you can help by

- seeing the wider picture
- digging in the details
- developing strategies
- combining your insights
- pointing at opportunities

this workshop

- we'll facilitate
 - your sharing your expertise
 - focusing on MIXED in small groups
 - plenary discussions about the outcome
 - wrap-up

last but not least

- we expect that each of you
- has a very rewarding time here
